## What is Covid-19?

- I. Coronavirus disease (COVID-19) is an infectious disease caused by a newly discovered coronavirus.
- II. Most people infected with the COVID-19 virus will experience mild to moderate respiratory illness and recover without requiring special treatment. Older people, and those with underlying medical problems like cardiovascular disease, diabetes, chronic respiratory disease, and cancer are more likely to develop serious illness.
- III. The best way to prevent and slow down transmission is to be well informed about the COVID-19 virus, the disease it causes and how it spreads. Protect yourself and others from infection by washing your hands or using an alcohol based rub frequently and not touching your face.
- IV. The COVID-19 virus spreads primarily through droplets of saliva or discharge from the nose when an infected person coughs or sneezes, so it's important that you also practice respiratory etiquette (for example, by coughing into a flexed elbow).

# Treatment of Coronavirus

## After exposure to someone who has COVID-19, do the following:

- Call your health care provider or COVID-19 hotline to find out where and when to get a test.
- Cooperate with contact-tracing procedures to stop the spread of the virus.
- If testing is not available, stay home and away from others for 14 days.
- While you are in quarantine, do not go to work, to school or to public places. Ask someone to bring you supplies.
- Keep at least a 1-metre distance from others, even from your family members.
- Wear a medical mask to protect others, including if/when you need to seek medical care.
- Clean your hands frequently.
- Stay in a separate room from other family members, and if not possible, wear a medical mask.
- Keep the room well-ventilated.
- If you share a room, place beds at least 1 metre apart.
- Monitor yourself for any symptoms for 14 days.
- Call your health care provider immediately if you have any of these danger signs: difficulty breathing, loss of speech or mobility, confusion or chest pain.
